

Linux OS – Lab 1

Task 1: Search Points

- What is the difference between Unix and Linux?
- What are the benefits of using a virtual machine (Type 2 HV) over a dual-boot system (Type 1 HV)?

Task 2: Virtualization Software

- **Setting up Virtual Machines:**
 - Install and open VMware Workstation (if not already installed).
 - Create a new virtual machine and configure it with the following:
 - **OS:** Linux distribution (CentOS).
 - **Disk Size:** 20+ GB.
 - **RAM:** 2+ GB.
 - If your system resources are not powerful enough, you can install only the Terminal tools without the GUI.
 - Power on the virtual machine and explore the basic interface.

Task 3: Basic System Navigation and Commands

- Switch to superuser mode using the **su** command, execute **cat /etc/passwd**, and then return to normal user mode using **exit** (or **CTRL + D**) command.
- Display the manual page for the touch command and create three text files using it.

Task 4: System Information Commands

- Execute the following commands and observe their outputs
 - **who, whoami, last, uname, hostname, hostnamectl.**
- Change your password using the **passwd** command.
- Change the system hostname using **hostnamectl** and confirm the change.
