

Linux OS – Lab 6

Task 1: Creating and Managing Archives

1. Create a directory **backup** and add some files inside it (e.g., **file1.txt** and **main.c**).
2. Archive the directory into **backup.tar**.
3. List the contents of **backup.tar**.
4. Extract the archive to **/tmp/recover**.

Task 2: Compressing Files

1. Compress the **backup** directory using **gzip**.
2. Compress it again using **bzip2** and **xz**.
3. Compare the sizes of the three compressed files.

Task 3: Remote Connections using SSH

1. Start the **SSH** service if it's not running using **systemctl**.
2. Find the **IP address** of the machine.
3. Connect to another machine using **SSH** service.
4. Disconnect from the session.
5. Stop the **SSH** service.
6. Verify that the **SSH** service is **inactive**.

Task 4: Copying Files Between Hosts

1. Copy **notes.txt** to a remote machine using **scp**.
2. Copy a file from the remote machine to your local machine.
3. Copy an entire directory to a remote machine.
